

DESCRIPTION

<i>Description</i>	Recombinant Human Angiotensin-converting enzyme 2 (ACE2) - Extracellular Domain NCBI Accession Number: NM_021804.3
<i>Sequence</i>	Ser19-Asp615 with an immunoglobulin heavy chain variable signal peptide
<i>Expression system</i>	HEK293 cells
<i>Tag</i>	HIS Tag C-Terminus
<i>Purification</i>	Affinity chromatography
<i>Extinction coefficient</i>	152220 M ⁻¹ .cm ⁻¹ Abs 0.1% (=1 g/l) 2.171 assuming all pairs of Cys residues form cystines
<i>Predicted Molecular Weight</i>	70.1 kDa

SPECIFICATIONS

<i>SDS Page</i>	Approx. 75 kDa
<i>Concentration</i>	0.35 mg/ml
<i>Size</i>	100 µg
<i>Purity</i>	>95% by SDS PAGE
<i>Formulation</i>	PBS
<i>Activity</i>	Recognized by Recombinant Receptor Binding Domain of Spike protein in binding assay
<i>Stability and Storage</i>	Store at -20°C. Avoid repeated freeze-thaw cycles

DATA

Angiotensin-converting enzyme 2 (ACE2)

Angiotensin-converting enzyme 2, or ACE2, is a protein bound to the plasma membrane of lungs, arteries, heart, kidney, and intestines cells. ACE2 plays an important role in the renin-angiotensin-aldosterone system (RAAS), and a major physiological role in the regulation of the heart, kidney and blood pressure.

ACE2 is also the cellular receptor for Severe Acute Respiratory Syndrome – coronavirus (SARS-CoV) and the new coronavirus (SARS-CoV-2) that is causing the coronavirus disease 2019 (COVID-19) pandemic.
